## Revision History

Date	Version	Notes
October 3	1.0	PK & JS added Functional Requirements 9.4,9.5,9.6,
Date 2	1.1	Notes

# **1 Purpose of the Project**

## **1.1 User Business**

*Insert your content here.*

## **1.2 Goals of the Project**

*Insert your content here.*

# **2 Stakeholders**

## **2.1 Client**

*Insert your content here.*

## **2.2 Customer**

*Insert your content here.*

## **2.3 Other Stakeholders**

*Insert your content here.*

## **2.4 Hands-On Users of the Project**

*Insert your content here.*

## **2.5 Personas**

*Insert your content here.*

## **2.6 Priorities Assigned to Users**

*Insert your content here.*

## **2.7 User Participation**

*Insert your content here.*

## **2.8 Maintenance Users and Service Technicians**

*Insert your content here.*

# **3 Mandated Constraints**

## **3.1 Solution Constraints**

- 3.1.1 The platform must be accessible as a website to provide ease of access to users without requiring special software installations.
- 3.1.2 The platform must adhere to HIPAA or relevant data protection regulations to ensure patient data privacy and security.
- 3.1.3 Access to the platform must be restricted to authorized users, with secure authentication processes in place.
- 3.1.4 The system must be capable of scaling to accommodate an increasing number of users and growing data storage needs as the client expands.
- 3.1.5 The platform must support assessment sessions of up to at least 30 minutes to align with standard telehealth consultation times.
- 3.1.6 The platform must support adaptable video and audio quality based on internet bandwidth, ensuring clarity and reliability during assessments.
- 3.1.7 The platform must comply with WCAG 2.1 accessibility standards, making it accessible to users with varying needs.
- 3.1.8 Patient records must be retained for a minimum of 7 years from the last visit or at least 1 year after the patient turns 18, whichever is longer, in accordance with California law.

## **3.2 Implementation Environment of the Current System**

- 3.2.1 The platform's hosting environment must meet HIPAA-compliance standards to ensure data security.
- 3.2.2 The development framework must support scalable, secure, and efficient web application development, compatible with existing technical infrastructure.

## **3.3 Partner or Collaborative Applications**

- 3.3.1 The platform must be capable of exporting data as an Excel file, allowing for easy sharing, analysis, and compatibility with other systems that clinicians may use for data processing.

## **3.4 Off-the-Shelf Software**

- 3.4.1 There are no mandated off-the-shelf software constraints.

## **3.5 Anticipated Workplace Environment**

- 3.5.1 The platform must be compatible across a range of devices, including desktops, tablets, and mobile phones.

## **3.6 Schedule Constraints**

- 3.6.1 The proof-of-concept shall be complete and demonstrated between Nov. 11-22, 2024.
- 3.6.2 Revision 0 of the project shall be complete and demonstrated between February 3-14, 2025.
- 3.6.3 The final product shall be complete and demonstrated between March 24-30, 2025.

## **3.7 Budget Constraints**

- 3.7.1 The project budget must not exceed \$750 CAD.

## **3.8 Enterprise Constraints**

3.8.1 *There are no mandated enterprise constraints.*

# **4 Naming Conventions and Terminology**

## **4.1 Glossary of All Terms, Including Acronyms, Used by Stakeholders involved in the Project**

*Insert your content here.*

# **5 Relevant Facts And Assumptions**

## **5.1 Relevant Facts**

- 5.1.1 The project is subject to healthcare privacy laws like HIPAA, ensuring that patient data is securely stored and managed.
- 5.1.2 The client has requested a web-based platform, indicating a preference for accessibility without the need for specialized software installations.
- 5.1.3 The platform will have two primary user roles. The clinicians who perform assessments and review results and the parents who administer the assessment to their children who are the patients.

## **5.2 Business Rules**

- 5.2.1 Only authorized users (clinicians) can access patient data.
- 5.2.2 Patient records must be retained for at least 7 years from the last visit, or 1 year after the patient turns 18, whichever is longer, to comply with California state law.
- 5.2.3 The platform must comply with WCAG 2.1 to ensure it is accessible to users with disabilities.
- 5.2.4 All patient data must be encrypted both in transit and at rest to maintain confidentiality and meet regulatory standards.

- 5.2.5 The platform must generate reports based on assessment data, which can be reviewed and stored within the system
- 5.2.6 Video and audio recordings must automatically adjust to optimize based on internet bandwidth, ensuring quality without excessive buffering or latency.

### **5.3 Assumptions**

- 5.3.1 All users of the system have reliable internet connections that can support telehealth video sessions.
- 5.3.2 All patient data will be stored on servers located in regions that comply with healthcare data residency regulations.
- 5.3.3 The platform is assumed to be accessible from various devices (desktops, tablets, mobile phones), though it may perform optimally on desktops.
- 5.3.4 Assessments will not exceed 30 minutes per session to fit standard telehealth consultation times.
- 5.3.5 It is assumed that users (both clinicians and patients) have a basic level of comfort with using web applications and online communication tools.
- 5.3.6 The platform may need to accommodate additional users and storage demands as the client scales its telehealth services over time.

## **6 The Scope of the Work**

### **6.1 The Current Situation**

*Insert your content here.*

### **6.2 The Context of the Work**

*Insert your content here.*

## **6.3 Work Partitioning**

*Insert your content here.*

## **6.4 Specifying a Business Use Case (BUC)**

*Insert your content here.*

# **7 Business Data Model and Data Dictionary**

## **7.1 Business Data Model**

*Insert your content here.*

## **7.2 Data Dictionary**

*Insert your content here.*

# **8 The Scope of the Product**

## **8.1 Product Boundary**

*Insert your content here.*

## **8.2 Product Use Case Table**

*Insert your content here.*

## **8.3 Individual Product Use Cases (PUC's)**

*Insert your content here.*

# **9 Functional Requirements**

## **9.1 Authentication**

**A1:** Description.

*Insert formal Specification*

**Rationale:** Insert Rational  
**Fit criterion:** Insert criterion here

## 9.2 System Setup

**SS1:** Description.  
*Insert formal Specification*  
**Rationale:** Insert Rational  
**Fit criterion:** Insert criterion here

## 9.3 User Interactions and Question Handling

**UIQH1:** Description.  
*Insert formal Specification*  
**Rationale:** Insert Rational  
**Fit criterion:** Insert criterion here

## 9.4 Data Collection and Storage

**DCS1:** The database shall store multimedia files including video, audio, and structured data for each session.

*Insert formal Specification*

**Rationale:** Video and audio files will provide extra information such as parent interference and other forms of bias/ cheating on the assessment.

**Fit criterion:** The system must successfully store and retrieve at least 1GB of video, audio and structured data per session without any data corruption.

**DSC2:** The system shall not store any personally identifiable textual information (e.g., patient name, address, or medical record number) in the database.

*Insert formal Specification*

**Rationale:** To maintain privacy and ensure compliance with data protection regulations such as HIPAA, identifying textual information must be excluded from storage in the database.

**Fit criterion:** An automated process shall verify and confirm that 100% of records in the database accessible by clinicians are anonymized and contain no identifying textual information.

**DSC3:** The database shall group all stored data by a unique user identifier to ensure data can be linked to specific users without storing identifiable information.

*Insert formal Specification*

**Rationale:** Using a unique user identifier allows for data organization and retrieval by patient without compromising patient privacy, supporting the requirement for anonymized data storage.

**Fit criterion:** The system must assign a unique identifier to every user and confirm through testing that 100% of session data is properly grouped and retrievable under that identifier, with no misassociated data.

## 9.5 Video and Audio Data Analysis

**VADA1:** The analysis model shall have access to the video and audio recordings of each session.

*Insert formal Specification*

**Rationale:** The data contains essential visual and auditory information that can help clinicians efficiently assess any speech-related disturbances and non-verbal cues.

**Fit criterion:** The model must successfully retrieve and process video data from 100% of completed assessment sessions without encountering data access errors.

**VADA2:** The analysis model shall identify speech disturbances, including interruptions, parental assistance on the assessment, or other irregularities in the background.

*Insert formal Specification*

**Rationale:** Detecting disturbances is critical for accurate assessment of speech disorders without bias so that clinicians and speech language pathologists can accurately provide diagnosis and treatment.

**Fit criterion:** The model must accurately identify and log at least 95% of speech disturbances from a set of test videos, validated against human observations.

**VADA3:** The system shall flag detected disturbances and associate them with specific timestamps in the video recordings.

*Insert formal Specification*

**Rationale:** Flagging disturbances and marking the exact points where they occur enables clinicians and speech-language pathologists to quickly review the relevant portions of the assessment, reducing the time needed for manual analysis.

**Fit criterion:** For each session, the model must accurately attach time stamps to disturbances identified in VADA2 with at least 95% accuracy.

## 9.6 Data Processing and Display

**DPD1:** The system shall retrieve processed assessment results from the database for report generation.

*Insert formal Specification*

**Rationale:** In order to generate reports, the system must access and extract the necessary data from the database, ensuring that all relevant assessment information is included.

**Fit criterion:** The system shall successfully retrieve all assessment data without errors within 10 seconds of a query being made.

**DPD2:** The system shall automatically generate a comprehensive report based on the retrieved assessment data, including flagged occurrences, timestamps, and patient performance metrics.

*Insert formal Specification*

**Rationale:** Automatically generating a report provides a streamlined process for clinicians to review the patient's performance, saving time on manual data compilation.

**Fit criterion:** The report must include all of the required data for each session, and must be generated within 10 seconds of the request.

**DPD3:** The system shall display the generated report in a user-friendly format, accessible through the platform's interface.

*Insert formal Specification*

**Rationale:** Clinicians need to be able to easily view and interpret the report to assess patient progress and determine next steps for therapy.

**Fit criterion:** The report must be displayed within the clinician's dashboard, formatted with charts and tables where applicable, and fully load

within 10 seconds.

**DPD4:** The system shall store the generated report in the database, linked to the corresponding patient's unique user identifier.

*Insert formal Specification*

**Rationale:** Storing the report ensures that clinicians can access previous assessment results, enabling them to track patient progress over time.

**Fit criterion:** The report must be stored in the database with a unique identifier and timestamp, and be retrievable for at least 7 years after creation.

**DPD5:** Clinicians shall be able to securely access previously generated reports from the database at any time.

*Insert formal Specification*

**Rationale:** Clinicians need on-demand access to reports to monitor progress and make informed treatment decisions during follow-up sessions.

**Fit criterion:** Clinicians must be able to access 100% of stored reports within 10 seconds.

## 10 Look and Feel Requirements

### 10.1 Appearance Requirements

## Appendix — Reflection

The information in this section will be used to evaluate the team members on the graduate attribute of Lifelong Learning. Please answer the following questions:

1. What knowledge and skills will the team collectively need to acquire to successfully complete this capstone project? Examples of possible knowledge to acquire include domain specific knowledge from the domain of your application, or software engineering knowledge, mechatronics knowledge or computer science knowledge. Skills may be related to technology, or writing, or presentation, or team management, etc. You should look to identify at least one item for each team member.
2. For each of the knowledge areas and skills identified in the previous question, what are at least two approaches to acquiring the knowledge or mastering the skill? Of the identified approaches, which will each team member pursue, and why did they make this choice?
