

Software Requirements Specification for Software Engineering: subtitle describing software

Team #22, TeleHealth Insights

Mitchell Weingust

Parisha Nizam

Promish Kandel

Jasmine Sun-Hu

October 4, 2024

Contents

1	Purpose of the Project	vi
1.1	User Business	vi
1.2	Goals of the Project	vi
2	Stakeholders	vi
2.1	Client	vi
2.2	Customer	vi
2.3	Other Stakeholders	vi
2.4	Hands-On Users of the Project	vi
2.5	Personas	vi
2.6	Priorities Assigned to Users	vi
2.7	User Participation	vii
2.8	Maintenance Users and Service Technicians	vii
3	Mandated Constraints	vii
3.1	Solution Constraints	vii
3.2	Implementation Environment of the Current System	vii
3.3	Partner or Collaborative Applications	vii
3.4	Off-the-Shelf Software	vii
3.5	Anticipated Workplace Environment	vii
3.6	Schedule Constraints	vii
3.7	Budget Constraints	vii
3.8	Enterprise Constraints	viii
4	Naming Conventions and Terminology	viii
4.1	Glossary of All Terms, Including Acronyms, Used by Stakeholders involved in the Project	viii
5	Relevant Facts And Assumptions	viii
5.1	Relevant Facts	viii
5.2	Business Rules	viii
5.3	Assumptions	viii
6	The Scope of the Work	viii
6.1	The Current Situation	viii
6.2	The Context of the Work	viii
6.3	Work Partitioning	ix

6.4	Specifying a Business Use Case (BUC)	ix
7	Business Data Model and Data Dictionary	ix
7.1	Business Data Model	ix
7.2	Data Dictionary	ix
8	The Scope of the Product	ix
8.1	Product Boundary	ix
8.2	Product Use Case Table	ix
8.3	Individual Product Use Cases (PUC's)	ix
9	Functional Requirements	ix
9.1	Authentication	ix
9.2	System Setup	xi
9.3	Assessment Interface	xii
9.4	Data Collection and Storage	xiii
9.5	Video and Audio Data Analysis	xiv
9.6	Data Processing and Display	xv
10	Look and Feel Requirements	xv
10.1	Appearance Requirements	xv
10.2	Style Requirements	xv
11	Usability and Humanity Requirements	xv
11.1	Ease of Use Requirements	xv

9 Functional Requirements

9.1 Authentication

FR-A1: The system shall allow a user to choose between a Parent or Clinician account prior to logging in.

Rationale: Users must be associated with the correct permissions determined by their role, which includes the level of information they have access to.

Fit criterion: Users must be able to directly select their account type prior to logging in.

FR-A2: The system shall allow a user to create a parent account with a unique username which does not exist in the database.

Rationale: Users must be able to create a unique account for parents to login for the assessment.

Fit criterion: Users cannot create accounts with usernames that already exist in the database.

FR-A3: The system shall allow a user with admin privilege to create a clinician account with a unique username which does not exist in the database.

Rationale: Admin-Users must be able to create a unique account for clinicians to login to view assessment results. Clinicians need to be approved by Admin-Users to have a clinician account.

Fit criterion: Users cannot create clinician accounts, without admin access, with usernames that already exist in the database.

FR-A4: The system shall allow a user with a unique username to login with their corresponding password.

Rationale: Users must be able to login to their account to restrict others from accessing their assessment or assessment results.

Fit criterion: Users must be able to provide the corresponding password to their unique username to login and successfully enter the system.

FR-A5: The system shall allow a user to logout.

Rationale: Users must be able to logout of their account to restrict others from accessing their information.

Fit criterion: Users must be able to logout and successfully exit the system.

9.2 System Setup

FR-SS1: The system shall allow a user to view information about the assessment.

Rationale: Users must be informed about relevant assessment information prior to starting the hardware checks.

Fit criterion: Users must be able to view information about the assessment upon logging in.

FR-SS2: The system shall allow a user to perform an audio hardware check.

Rationale: Users must be able to perform an audio equipment check to ensure their input and output audio devices are functioning.

Fit criterion: Users must be able to verify their audio devices are functioning with the system.

FR-SS3: The system shall allow a user to perform a video hardware check.

Rationale: Users must be able to perform an video equipment check to ensure their video capturing device is functioning.

Fit criterion: Users must be able to verify their video capturing device is functioning with the system.

FR-SS4: The system shall provide a tutorial for a user to learn the assessment process.

Rationale: Users must be able to walkthrough a tutorial to understand how to properly complete the assessment.

Fit criterion: Users must be brought to the tutorial upon completing the audio and video hardware checks.

FR-SS5: The system shall allow a user to start an assessment.

Rationale: Users must be able to decide when they start an assessment.

Fit criterion: Users must be brought to the first assessment question upon starting the assessment.

9.3 Assessment Interface

FR-AI1: The system shall record user's audio and video upon starting the assessment.

Rationale: The system must be able to collect audio and video recordings for future analysis.

Fit criterion: The system must indicate to the user that audio and video recordings are ongoing.

FR-AI2: The system shall play audio prompts at the beginning of each question.

Rationale: The system must be able to play the respective question's audio to answer the given question.

Fit criterion: The system must successfully play the respective question's audio upon entering a new question.

FR-AI3: The system shall display a question's options for a user to select.

Rationale: Users must be able to provide a response to the question's audio for future analysis.

Fit criterion: The system must display the question's respective options upon starting a new question.

FR-AI4: The system shall allow a user to select one of the displayed options.

Rationale: Users must be able to select their best option to answer the question.

Fit criterion: The system must indicate to the user their selected response.

FR-AI5: The system shall allow a user to confirm their selection.

Rationale: Users must be able to confirm their selection to proceed to the next stage.

Fit criterion: Users must be brought to the next stage upon confirming their selection.

FR-AI6: The system shall keep track of the user's current question.

Rationale: The system must be able to keep track of the time the user enters and exits each question, to synchronize with the audio and video

recordings.

Fit criterion: The system must store the user's timestamps upon completing each question.

FR-AI7: The system shall inform the user about the assessment's completion.

Rationale: The system must inform the user of the test's completion to indicate they can exit the system.

Fit criterion: The user must be informed about the test's completion upon confirming the selection of the final question.

9.4 Data Collection and Storage

DCS1: The database shall store multimedia files including video, audio, and JSON format files for each session.

Insert formal Specification

Rationale: These file types are necessary to capture the full scope of the speech-language assessment, including patient responses and the structured data associated with each session (e.g., flagged occurrences, timestamps).

Fit criterion: The system must successfully store and retrieve at least 1GB of video, audio, and JSON data per session without data corruption.

DCS2: The database shall record the video, audio, flagged occurrences (e.g., errors or critical moments during the assessment), and timestamps for each question asked during the assessment.

Insert formal Specification

Rationale: Storing flagged occurrences and timestamps lets clinicians perform detailed analysis of patient responses and enables them to review specific moments of interest efficiently.

Fit criterion: The database shall include video and audio files for 100 percent of assessment sessions, and each recording must have flagged occurrences and timestamps associated with every question asked, retrievable via query.

DSC3: The system shall not store any personally identifiable textual information (e.g., patient name, address, or medical record number) in the database.

Insert formal Specification

Rationale: To maintain privacy and ensure compliance with data protection regulations such as HIPAA, identifying textual information must be excluded from storage in the database.

Fit criterion: ??.

DSC4: The database shall group all stored data by a unique user identifier to ensure data can be linked to specific users without storing identifiable information.

Insert formal Specification

Rationale: Using a unique user identifier allows for data organization and retrieval by patient without compromising patient privacy, supporting the requirement for anonymized data storage.

Fit criterion: The system must assign a unique identifier to every user and confirm through testing that all session data is properly grouped and retrievable under that identifier, with no misassociated data.

DSC5: Description.

Insert formal Specification

Rationale: Insert Rational

Fit criterion: Insert criterion here

9.5 Video and Audio Data Analysis

VADA1: Description.

Insert formal Specification

Rationale: Insert Rational

Fit criterion: Insert criterion here

VADA2: The analysis model shall have access to the video recordings of each session for the purpose of processing and analyzing patient speech patterns and behavior.

Insert formal Specification

Rationale: The video data contains essential visual and auditory information that the model needs to analyze in order to assess speech-related disturbances and non-verbal cues.

Fit criterion: Insert criterion here

9.6 Data Processing and Display

DPD1: Description.

Insert formal Specification

Rationale: Insert Rational

Fit criterion: Insert criterion here

10 Look and Feel Requirements

10.1 Appearance Requirements

Insert your content here.

10.2 Style Requirements

Insert your content here.

11 Usability and Humanity Requirements

11.1 Ease of Use Requirements

UH-EOU1. The system shall be intuitive for new users to understand.
Rationale: Fit criterion:

UH-EOU2. The system shall provide detailed instructions on how to use key features of the application, along with its purpose.
Rationale: Fit criterion:

UH-EOU3. The system shall use icons without labels only if they are universal icons, icons having intuitively understandable meanings.
Rationale: Fit criterion:

11.2 Personalization and Internationalization Requirements

UH-PI1. The system shall support multiple languages. Rationale: Fit criterion:

11.3 Learning Requirements

UH-LI1. The system shall not require additional resources to be navigated. Rationale: Fit criterion:

UH-LI2. The system shall include a user-guide for additional usage information. Rationale: Fit criterion:

11.4 Understandability and Politeness Requirements

UH-UP1. The product will not use technical language when displaying information to the user. Rationale: Fit criterion:

11.5 Accessibility Requirements

UH-A1. The system shall be simple and intuitive for assessment interactions with children. Rationale: Fit criterion:

12 Performance Requirements

12.1 Speed and Latency Requirements

Insert your content here.

12.2 Safety-Critical Requirements

Insert your content here.

12.3 Precision or Accuracy Requirements

Insert your content here.

12.4 Robustness or Fault-Tolerance Requirements

Insert your content here.

12.5 Capacity Requirements

Insert your content here.

12.6 Scalability or Extensibility Requirements

Insert your content here.

12.7 Longevity Requirements

Insert your content here.

13 Operational and Environmental Requirements

13.1 Expected Physical Environment

OE-EPE1. The system can be run on all browser-supported devices regardless of screensize.

Rationale: Fit criterion:

13.2 Wider Environment Requirements

OE-WE1. The system shall be used in a quiet environment.

Rationale: Fit criterion:

OE-WE2. The system shall be used with an internet connection.

Rationale: Fit criterion:

13.3 Requirements for Interfacing with Adjacent Systems

OE-IA1. The system shall be hosted on an external server for retrieving and storing data.

Rationale: Fit criterion:

13.4 Productization Requirements

OE-P1. N/A

13.5 Release Requirements

OE-R1. N/A

14 Maintainability and Support Requirements

14.1 Maintenance Requirements

Insert your content here.

14.2 Supportability Requirements

Insert your content here.

14.3 Adaptability Requirements

Insert your content here.

15 Security Requirements

15.1 Access Requirements

SR-AC1. Only users with an Admin role can create and assign accounts to clinicians.

Rationale: Full access of the system and permissions including creating clinician accounts should only be available to admin roles by the system.

Fit criterion: Admin users will have full access to the system including create clinician accounts, viewing data records, and starting assessments.

- SR-AC2. Users with parent roles can complete assessments.
Rationale: Users with a parent role should have the ability to create accounts and complete assessments with their children on the system.
Fit criterion: Users with parent roles will only be able to create a parent account, login to the system, have access to completing the assessments, and logging off the system
- SR-AC3. Users with clinician roles can view assessment results.
Rationale: Clinicians must be able to see all video and audio recordings of completed assessments, as well as the analyzed results from the system to aid in their research.
Fit criterion: User with a clinician role will not be able to log in to a parent account and start/complete assessments.
- SR-AC4. Users shall input their username and password to securely login.
Rationale: Users should be able to securely login by inputting their login credentials to ensure to prevent unauthorized access.
Fit criterion: A user should not be able to login to an account they do not have the required credentials for.

15.2 Integrity Requirements

SR-INT1. N/A

15.3 Privacy Requirements

- SR-P1. The system shall adhere to all data protection and privacy laws in the region its used.
Rationale: The system will respect the privacy and confidentiality of all users to adhere to all applicable protection laws.
Fit criterion: The system will be reviewed prior to public release to ensure it follows all applicable protection laws
- SR-P2. The system shall encrypt all sensitive data in transit and at rest to keep data confidential.
Rationale: The system should encrypt sensitive data at all times to ensure high level of security to protect user information from potential data footage leaks, and unauthorized access

Fit criterion: Data follows the standard encryption protocol at all times; data is encrypted when in transit and only decrypted when viewed by clinician user for analysis purposes.

SR-P3. The system shall not collect any personal identifiable information from the user.

Rationale: The system should not collect any personal identifiable information to ensure confidentiality of all video and audio recordings associated with the user.

Fit criterion: The system does not store any personal identifiable information. All data stored includes, username, and data/audio recordings only.

15.4 Audit Requirements

SR-AU1. N/A

15.5 Immunity Requirements

SR-IM1. The system must mandate strong passwords.

Rationale: The system must require a strong password mandate to secure user accounts from unauthorized access.

Fit criterion: The system will complete account creation upon entering a valid password that follows the specified mandate.

16 Cultural Requirements

16.1 Cultural Requirements

Insert your content here.

17 Compliance Requirements

17.1 Legal Requirements

CR-LR1. N/A

17.2 Standards Compliance Requirements

CR-STD1. The system shall use security measures to protect all stored user assessment data.

Rationale: The system must use strong security measures to protect sensitive and confidential user information including collected video and audio recordings from assessment results to ensure privacy and integrity.

Fit criterion: All stored user assessment data is only associated with a username.

18 Open Issues

26 Ideas for Solution

Insert your content here.

Appendix — Reflection

The information in this section will be used to evaluate the team members on the graduate attribute of Lifelong Learning. Please answer the following questions:

1. What knowledge and skills will the team collectively need to acquire to successfully complete this capstone project? Examples of possible knowledge to acquire include domain specific knowledge from the domain of your application, or software engineering knowledge, mechatronics knowledge or computer science knowledge. Skills may be related to technology, or writing, or presentation, or team management, etc. You should look to identify at least one item for each team member.
2. For each of the knowledge areas and skills identified in the previous question, what are at least two approaches to acquiring the knowledge or mastering the skill? Of the identified approaches, which will each team member pursue, and why did they make this choice?
